

Activating the SignNow Integration in BidBuild

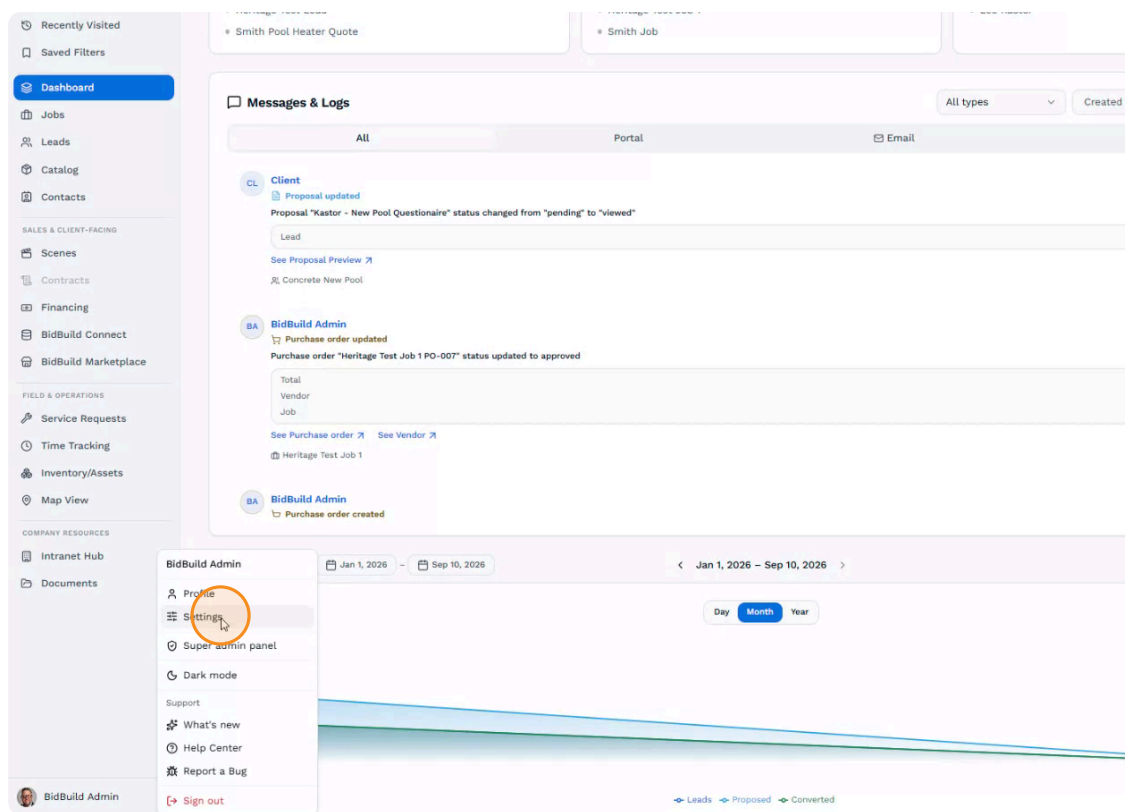

This document explains how to activate and configure the SignNow integration in BidBuild, either by connecting your own SignNow API account or by purchasing e-signature credits directly through BidBuild.

Step 1: Open BidBuild Settings

Navigate to the bottom-left corner of the BidBuild interface and open the Settings menu.

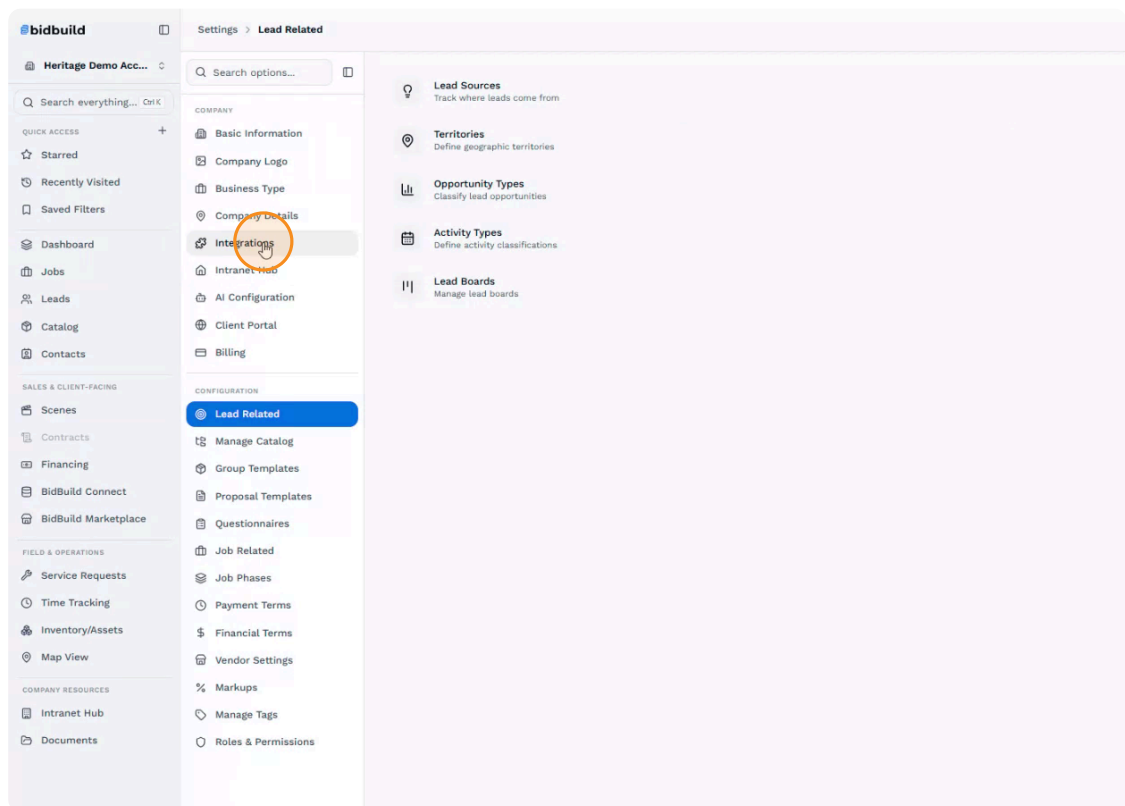

Within the menu, click on **Settings** to access the configuration options.

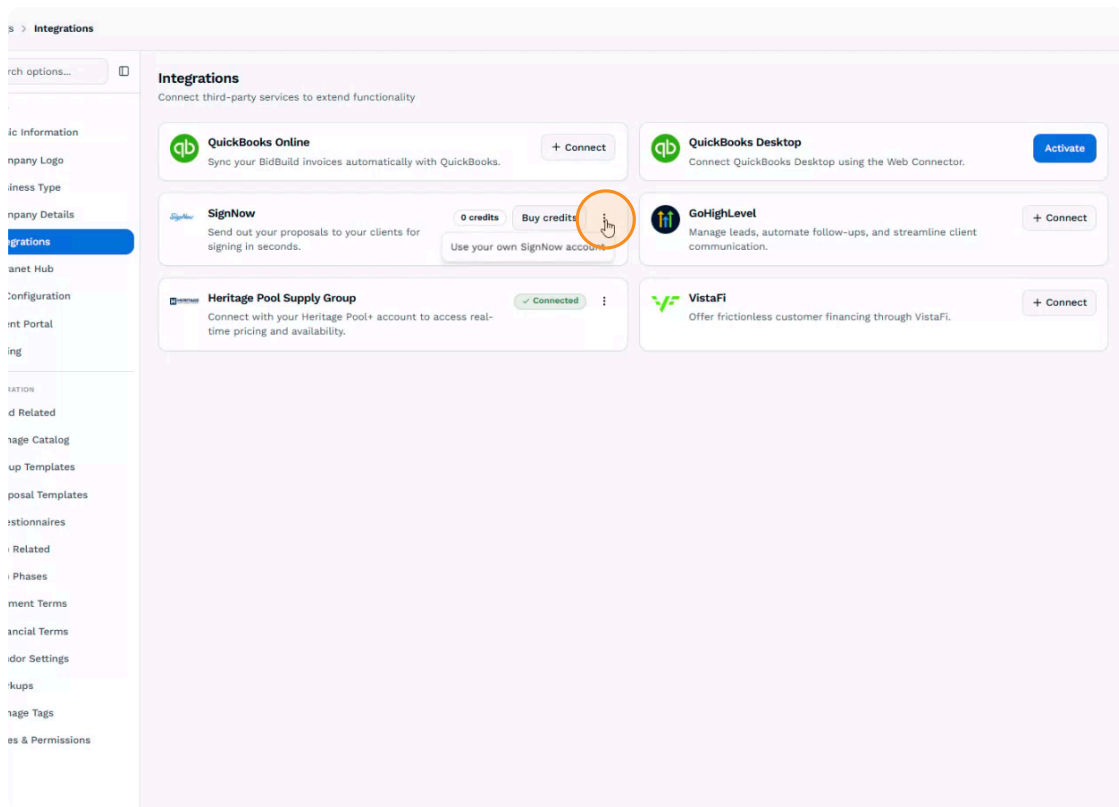

Step 2: Access the Integrations Section

Inside Settings, go to the **Integrations** section where you can manage connected applications and services.

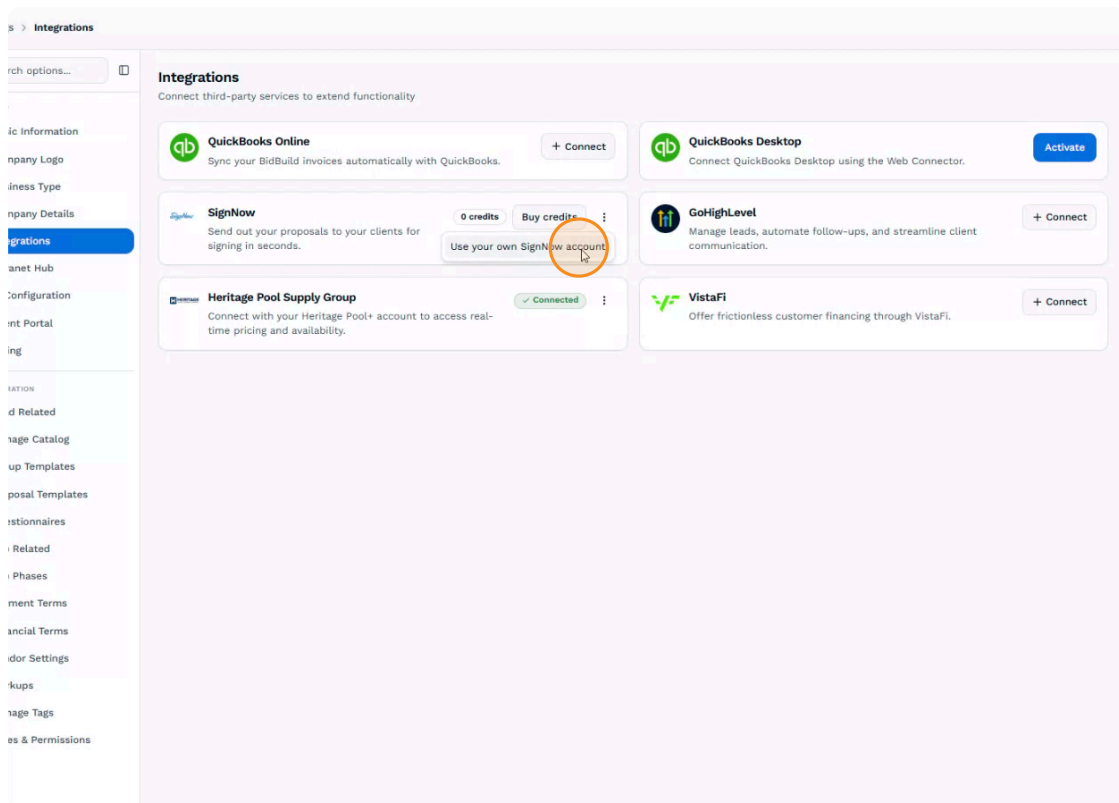

Step 3: Connect Your Own SignNow API Account

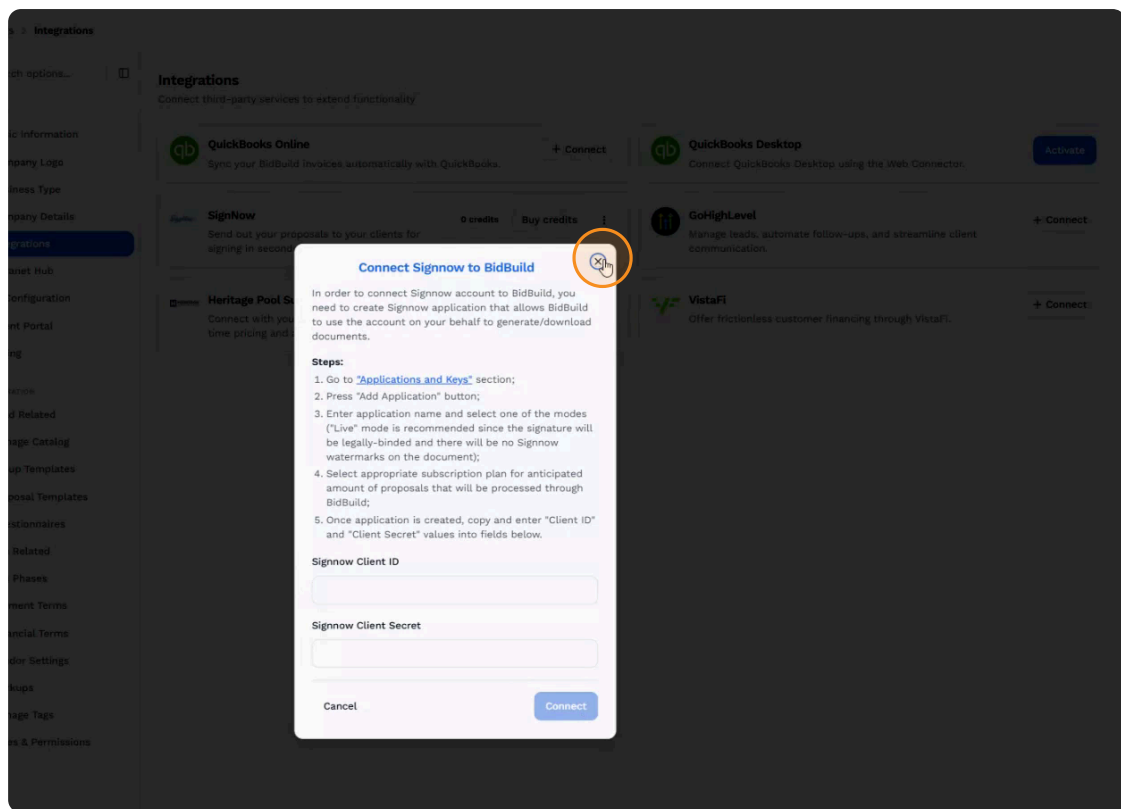

If you already have a SignNow account with API access enabled, click on the three dots next to the SignNow integration to configure it.

Select the option to **Use your own SignNow account**.

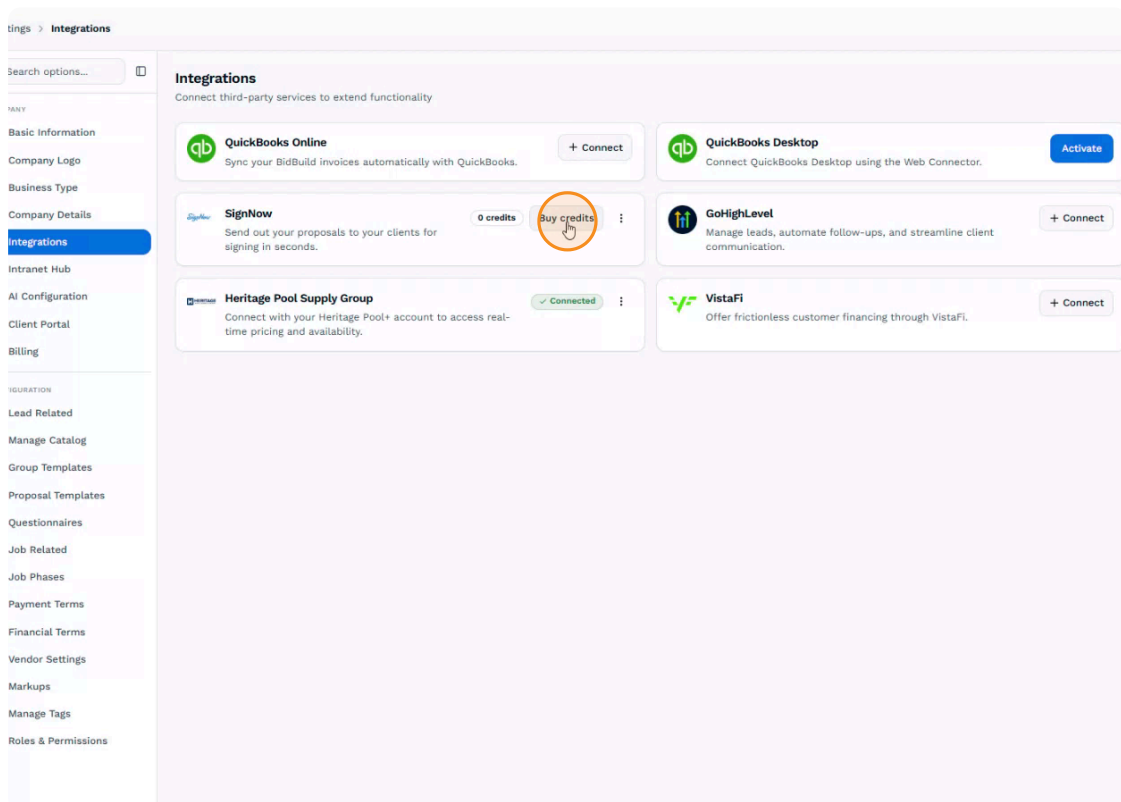

You will be prompted to enter your **Client ID** and **Client Secret** from SignNow. After entering these credentials, click **Connect** to link your SignNow account.

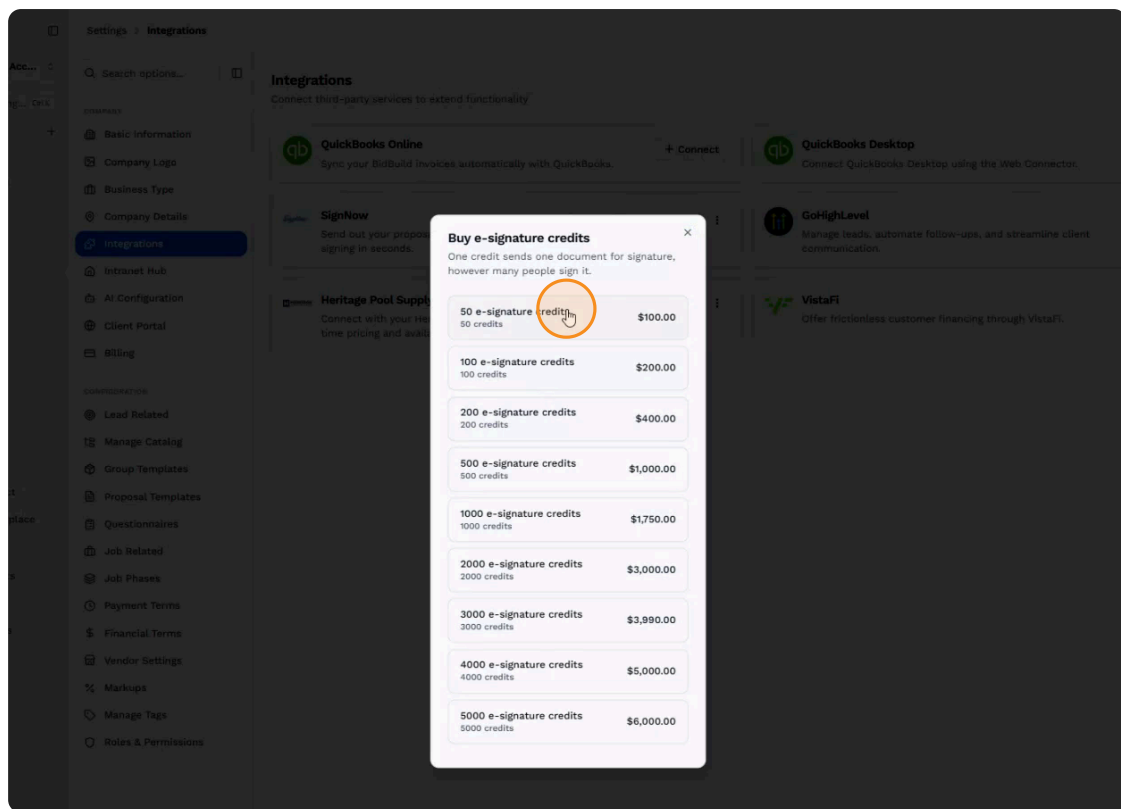

Step 4: Purchase E-Signature Credits Through BidBuild (Alternative Option)

If you prefer not to use your own SignNow API account and instead purchase credits through BidBuild, select the **Buy credits** option in the SignNow integration area.

Choose the quantity of e-signature credits you want to purchase.

You will then be redirected to the payment page to complete your purchase. After the payment is processed, your e-signature credits will be added to your BidBuild account and will be available for use.
